Distribution Statement: Distribution A - AFRL 2024-4862

NIPRGPT

A custom Generative Pre-trained Transformer (GPT) tool

NIPRGPT uses Artificial Intelligence (AI) to help DAF Airmen, Guardians, and researchers explore the potential of AI in delivering relevant and reliable outputs from extensive unstructured knowledge. The technology automates complex tasks, improves decision-making, and boosts efficiency.

The application domains explored under NIPRGPT provide various contexts to evaluate the technology. They explore low barrier to entry applications, enabling Airmen and Guardians to meaningfully engage with the industry and serve as pioneers for emerging AI processes and uses.

NIPRGPT will also nurture an AI-ready workforce that can ethically and responsibly employ these technologies as new tools enter the marketplace.

NIPRGPT is powered by advanced AI, exploring several open-source models to give Airmen and Guardians the potential to streamline operations. Specifically, its Retrieval Augmented Generation (RAG) feature retrieves data to generate contextual responses, reducing inaccuracies and bolstering output reliability.

In collaboration with the Air Force Office of the Chief Information Officer, we have recently launched a critical science and technology research initiative called NIPRGPT. This initiative aims to explore how warfighters can benefit from generative AI technology in their daily work.

Explore NIPRGPT firsthand to reduce toil, increase efficiency. Visit NIPRGPT.mil

NIPRGPT

- Handles Controlled Unclassified Information (CUI) securely.
- It is approved for Impact Level 5, but not for PII, PHI, or higher.
- Utilizes advanced AI for text understanding and generation.
- Streamlines complex tasks and allows for improved decision-making and enhances efficiencies.
- Features Retrieval Augmented Generation (RAG).
- RAG retrieves relevant information and generates contextual responses.
- Mitigates 'hallucinations' by anchoring responses in verified data.
- Enhances reliability and trustworthiness of output.

NIPRGPT workspaces for Retrieval Augmented Generation (RAG).
