

# STITCHES Information System (SAAS)

## User Getting Started Guide

### STITCHES Shared Services (Top Level Nav)

At the top of the STITCHES interface, you will see many popular shared services that will be critical to your success.

1. **Account (User Profile):** The user profile tab will take you to your Keycloak profile. Keycloak is the main mechanism for identity and approval during the Bravo II Hackathon. Users who are already set up with Keycloak access can log in and change their user settings by clicking this link.
2. **Gitlab:** This provides one-click access to Gitlab projects.
3. **Project Store:** Project Store is a metrics dashboard for understanding the activity across Gitlab projects. You can use this tool to understand what projects are popular and available.
4. **Live VMs:** This provides access to virtual application environments complete with all dependencies to support successful app development and operation.
5. **Filestash:** This is our file storage repository, which can be used with your coding environments to store and collaborate on documents securely.
6. **JupyterHub:** This provides one-click access to our hosted data science development environment, which supports Python, R, and Scala development through hosted workbooks.
7. **Forums:** This tab takes you to our community in discourse. Browse topics, submit questions, and review knowledge-base articles for better self-service development and troubleshooting. For official questions and requests, please submit a ticket through the help desk.
8. **STITCHES Training: Here, you will find all STITCHES training videos (powered by Moodle) and videos on using the STITCHES systems.** You can review and stream videos directly inside the interface.
9. **24x7 Support:** This tab takes you to the main ticketing system for the STITCHES Information System (Powered by Zammad). The ticketing system will allow you to interface with the support team at Nalej as well as interact directly with the program team.
10. **Releases:** The releases tab is where you will find the downloads for each release of the STITCHES FTG Toolchain and SoSITE GUI.
11. **Documentation:** You will find documentation on all our tools and services and detailed information about our LiveVM services.
12. **Search:** This search bar provides a universal search across the entire site and documentation.
13. **ATOs, Policies, and Regulations:** You are able to access information on the continuous ATO (cATO) process.

## Tooling Categories

### **Gitlab QuickStart**

The Gitlab QuickStart section gives you one-click access to the popular services in our Gitlab environment. These include starting a new project and defining project groups. Simply click on the icon and sign into Git to get started. Not sure which projects to jump into? The project store shows you all the projects and sorts by activity.

### **DevSecOps**

At the heart of the BRAVO Gemini platform are our DevSecOps development environments. These include a hosted (GPU-enabled) Jupyterhub instance that supports collaborative development in Python, R, and Scala, as well as the application of hundreds of open-source packages for common data science and ML development. For systems development, we have also included a link to our full OVA library that houses powerful development packages for full system and application development. You will also find ways to gain access to administrative tools like Secret Vault and Cert Manager and additional information about utilizing GPUs in the Gemini Server environment and on your laptops.

### **DevSecOps Tools and Storage**

To support our DevSecOps environments, we have included access to many common DevSecOps tools bundled based on dependencies and workload requirements. Once you have found the tools you need for your challenge, visit the OVA library to find out more information on how to leverage the offline NALEJ packages.

### **DataSecOps, ETL and Data Science**

Here you will find advanced tools for exploratory data science development and DataOps orchestration. We provide access to visualization tools like Apache SuperSet. For real-time data movement and processing, we have provided tools like Apache Kafka and Apache Nifi. For model tracking and model registration, we include MLFlow, and for chatbot development on LangChain, we have provided an open-source tool called Flowise.

### **Developer Packages and Repositories**

Package Hub is your gateway to accessing hundreds of popular Python and Linux packages. Looking for tools like Pytorch, LangChain, Matplotlib, and more? Visit the package hub repository and search for the tools you need. Packages can be applied to projects in our hosted Jupyterhub environments or as part of the development using our OVA packages for data science and AI development.

### **Frontend Builder Tools**

The Frontend Builder tools are bundled to provide BRAVO 11 participants with the tools to quickly prototype and launch full-scale applications on top of their solutions. We have included a bundle that includes React, Backstage, Hugo, and Node.js which serve as a powerful open-source toolkit for application and light UI development.

### **EDGE/STITCHES Applications, Tools, Services and Ops**

Here, you will find all the downloads associated with running the STITCHES FTG Toolchain, along with tools like Patch Panel and GATGUI. For more information on specific STITCHES releases, visit our RELEASES section in the top navigation.

## Network Ops

**Certified Browsers:** Here you will find the supported browser interface to ensure proper operations of the STITCHES platform environment. **Please download this browser before beginning development.**

### **API Framework: Build Your Own API**

For both API development and the leveraging of APIs we have provided an API bundle with tools like Spring Boot, Django, and Postman. You will also find our DataFile2DB API, which can help with data orchestration, ETL, and Change Data Capture.

### **GOV/MIL/DIP Application Tools Services and Ops**

Search through a list of third-party offerings and tooling for local development inside the DoD ecosystem of partners and solutions.

### **ATO Applications, Tools, Services and Ops (STITCHES Platform Enabled)**

Here, you will find access to the container security scan tool.

## Support

### *User and Account Registration*

Navigate to <https://www.stitches.mil/>. You will need to register for the platform.

Once your account is approved you will gain access to the secure environment (usually within 24 – 48 hours). For trouble getting access please contact [sdo@nalej.com](mailto:sdo@nalej.com).

### *Troubleshooting and Issues*

For trouble with the STITCHES platform please start with searching the FAQ area in the FORUMS section of the navigation. If you are unable to resolve your issue from the documented FAQs please submit a ticket in the STITCHES system. For system-critical issues, please contact [sdo@nalej.com](mailto:sdo@nalej.com).
